

Mouthpiece Placement

Placement

- Put the bottom portion of the mouthpiece on your bottom in the middle of the bottom teeth. Tilt the mouthpiece upward to where it touches the top lip. Note the mouthpiece placement on the lips is a ratio of 2/3 upper lip and 1/3 lower lip.
- Angle mouthpiece toward the floor in front of you, with more pressure on bottom lip than the top. The angle is approximately a 30-45 degree angle from the body.

Common Errors

- Mouthpiece too low on lips
- Mouthpiece angle too straight
- Too much pressure
- Mouthpiece not centered on embouchure
